OUR HISTORY

SINCE 1901

What began over a century ago as a simple furniture polish laboratory in the garage of founder Frank Meguiar Jr., has spanned four generations of the Meguiar family.

In his wildest dreams, it's doubtful that Frank Meguiar, Jr., could have foreseen what his first bottle of furniture polish in 1901 would evolve into over the next 100+ years.

Meguiar's, Inc. has become the global leader in appearance care and is proud to offer our next generation of products, tools and accessories to serious car enthusiasts. We strive to set an entirely new standard for quality and performance in the industry.

From his first bottle of furniture polish, Frank Meguiar, Jr. built his business on excellent products and an understanding of his consumer's needs.

Today, Meguiar's enduring and strong relationship with serious car enthusiasts worldwide has created a level of trust and respect for the brand that transcends our products and embodies the lifestyle of the car hobby.

To this day, Meguiar's is committed to delivering products and building relationships that excite and unite car enthusiasts and professionals worldwide.

5 STEPS TO PAINT CARE

STEP 1: WASH

Wash your car using a specially formulated car wash. Dish washing soaps & detergents strip your car's wax and can dry your paint out leading to a loss of gloss and shine.

STEP 2: CLEAN/PREP

Check for & remove above-surface contaminants like tree sap with Meguiar's® Smooth Surface™ Clay Kit before checking for below-surface defects. The most effective way to remove below surface paint problems like oxidation, fine scratches and swirls is to use a clear coat safe paint cleaner like Meguiar's® Ultimate Compound.

STEP 3: POLISH (OPTIONAL)

Polishing is recommended as an optional step, especially for dark-coloured cars, prior to waxing to help create the ultimate in high gloss.

STEP 4: WAX/PROTECT

To protect and add a brilliant shine to your paint's surface, use only premium car wax or paint coating products.

STEP 5: MAINTAIN

Regular maintenance removes above-surface contaminants like bird droppings or tree sap before they have time to bond or etch into your paint finish. Meguiar's® Ultimate Quik Detailer dramatically extends the durability of your wax protection & safely removes dust and grime between washes.

WHAT'S THE BEST PRODUCT TO USE ON MY NEW CAR?

All of Meguiar's® products are safe to use on your new car, but brand new cars are unique in that the paint should be in excellent condition. If you adopt just a few routine maintenance procedures, you can keep your car looking new for a long, long time. As Barry Meguiar often says,

"Frequent car care is EASY car care!" Follow the 5 steps to paint care, using products designed for automotive care.

- Wash your car weekly, using a quality microfibre wash mitt and premium car wash/ shampoo.
- Apply a high quality automotive wax 3-4 times a year.
- Maintain your car in-between washes by using a mist and wipe Meguiar's® Quik Detailer® or Meguiar's Ultimate Waterless Wash & Wax to remove dust & contaminants.
- Clay your car as needed.
- Protect your interior and exterior trim and tyres with quality protectants and tyre dressing.

HOW DO I GET RID OF SWIRL MARKS AND SCRATCHES?

It depends on the severity and extent of the blemish. First, if you can catch your fingernail in the scratch, you will need professional help to correct it as it's very deep. We recommend the following: For very light scratches and swirls, Meguiar's® Ultimate Polish is the answer and may be applied by hand, orbital buffer or dual action polisher (DA). For heavier scratches, oxidation, or just generally neglected paint, Meguiar's® Ultimate Compound is the perfect choice. It too can be safely applied by hand, orbital buffer or with a DA. If you have an isolated scratch, fingernail mark or light scuff, Meguiar's® ScratchX™ will safely provide the muscle to remove it.

WHAT'S A "DUAL ACTION" POLISHER AND WHY SHOULD I USE IT?

While most professional detailers use a DA, they are definitely not restricted to "Pro" use only. Overall, the DA will produce better results, faster. All quality DA Polishers have been designed, along with our pads for both do-it-yourself & professional use. These fantastic machines make paint correction a breeze, and you can also apply a coat of your favourite wax in virtually no time. The best thing about DA Polishers is that they are completely safe to use and will not damage or "burn through" your paint like a rotary polisher.

HOW DO I REMOVE WATER SPOTS?

The obvious answer is to prevent getting water spots in the first place by keeping your vehicle waxed and maintained, as well as washing and drying the vehicle in the shade and when the surface is cool. For those times where you do get that nasty, water spot surprise, we recommend Ultimate Compound, after you've washed your car (of course!)

WHICH IS BETTER: SPRAY, LIQUID OR PASTE WAX?

It depends on your goal or expectation. Our Hybrid Ceramic Wax delivers incredible durability and ease of use and you can wax your car in just minutes.

Paste & liquid waxes also add gloss & deep reflections. Between paste and liquid waxes, it's really a matter of preference as both deliver long-lasting protection, gloss and shine.

HOW DO I REMOVE THE ROUGH FEELING FROM MY PAINT?

Your paint should feel mirror smooth to the touch. Roughness is caused by bonded microscopic contaminants. These contaminants reduce gloss. Our Smooth Surface Clay Bar Kit will quickly and safely restore a smooth glossy finish with almost no effort.

HOW DO I CHOOSE THE RIGHT WHEEL CLEANER?

Wheel rims are offered in many types - clear coated alloys, chrome, uncoated aluminium, steel and sometimes, a combination of these.

With Meguiar's Ultimate All Wheel Cleaner, no more guess work is needed - it is safe on all wheels and will not harm powder coated brake callipers. The pH neutral formula goes to work dissolving brake dust, making cleaning even complex wheel designs quick and easy.

WHAT IS HYBRID CERAMIC?

Some of our newest paint protection waxes and coatings include this technology. Based on Silicon Di-Oxide, a component of ceramic (hence the name), our Hybrid Ceramic range is able to offer incredibly resilient protection that is also so easy to apply. The results speak for themselves - exceptionally high gloss, extreme durability and a strong hydrophobic (water repellent) surface that causes water to bead and run right off.

HOW LONG DOES YOUR WAX LAST?

There is no standard answer regarding this as there are many variables that affect wax durability: Type & condition of paint, local environment, exposure duration, quality & type of wax & its application, quality of car wash, your personal tastes, preferences and expectations to name a few. Generally speaking, however, we recommend waxing your car every 3-4 months or when your finger "squeaks" on a freshly washed surface.

YOU'VE GOT QUESTIONS, WE'VE GOT ANSWERS!

0861-CARGUY [227489]

FOR FREE, EXPERT CAR CARE ADVICE

JOIN THE FAN CLUB

MEGUIARSSOUTHAFRICA

HOW LONG DO I WAIT BEFORE BUFFING THE WAX AFTER IT'S APPLIED?

Drying time for wax is dependent on temperature and humidity, so there's no set time. We employ a simple "swipe" test to determine if the wax is ready to remove. Simply swipe the tip of your finger (no, NOT the fingernail side!) over the waxed panel. If the swiped area is clean and clear with no smudging, the wax is ready to be removed. If you see smearing or streaking, wait a few more minutes and then try swiping again.

STEP 1 WASH

STEP 1 WASH

In automotive paint care, washing and cleaning are not the same. While they sound similar, they are vastly different procedures. Washing removes loose contaminants from your finish like dust, road grime, and fresh bird droppings. We'll cover cleaning in Step 2.

A common misconception is that dish washing detergent is safe to use as car wash. Absolutely not! Detergents are formulated to strip everything off of the surface, leaving it squeaky clean.

A squeaky paint finish tells you that it has no protection. With repeated use, dish washing detergents remove everything from your paint finish including waxes, silicones and polymers. Once this is accomplished, they then proceed to remove the life giving oils in your paint finish, actually accelerating the oxidation process. All of Meguiar's car wash products are pH balanced and specifically formulated to enhance the appearance and protection of automotive paint finishes.

MEGUIAR'S® ULTIMATE WATERLESS WASH & WAX

- No water? NO PROBLEM! Safely wash & wax your car anywhere, WITHOUT WATER!
- More than a detailer, our water spot-free formula removes grime without scratching!

768 ML PRODUCT CODE: G3626

MEGUIAR'S® DEEP CRYSTAL™ CAR WASH

- Meguiar's most popular wash!
- Tons of suds safely remove dirt & grime.
- Will not strip wax protection.

1,89 L PRODUCT CODE: G10464

STEP 2

CLEAN & PREP

STEP 2 CLEAN & PREP

Cleaning, or Surface Preparation, removes stubborn, bonded above-surface contaminants, as well as below-surface defects, like swirls, random isolated scratches, and oxidation. After your car is washed, pass your fingertips over the surface. Do you feel roughness like micro speed bumps on your paint? If so, these are above-surface, bonded contaminants.

Generally, you'll notice this contamination on your car's horizontal surfaces, but you may also see small, dark spots/specks on the rear and lower surfaces of a light coloured car. Over time, these contaminants will dull your paint and rob your car of its shine.

Fortunately, Meguiar's® Smooth Surface™ Clay Kit includes everything that you need to safely, and easily, remove bonded contaminants. And no, clay bars are NOT only for professional use. If you have ever played with Silly Putty, you can use clay.

KIT PRODUCT CODE: G190200

BELOW SURFACE CONTAMINANTS

ACID RAIN ETCHING	SCRATCHES & SWIRLS	OXIDATION	STAINS

CLEAR COAT

BASE COAT

SUBSTRATE/PRIMER

BODY PANEL

After removing bonded contaminants that you can feel, examine the finish from different angles and light sources to detect below-surface defects like oxidation (dullness), stains/ blemishes and fine scratches.

Small below-surface imperfections such as oxidation, stains, small marks and scratches can safely be removed using Meguiar's® ScratchX ™ or Ultimate Compound, giving a flawless finish prior to polishing and waxing.

STEP 3 POLISH

STEP 3 POLISH

Polishing is an optional step, and is different from waxing. While some modern-day marketers have caused confusion by naively misusing the terms, the definitions are clear. As in polishing a diamond, the sole purpose of polishing is to create brilliant high gloss. For car show enthusiasts who are obsessed with having perfectly clear reflections, Meguiar's® Ultimate Polish is the perfect choice. Waxing falls under the larger heading of protecting the paint finish, which we'll discuss in step 4.

ULTIMATE
POLISH
Gloss Enhancer
Quickly Eliminates Fine Swirls
Deep Reflections & High Gloss

STEP 4 WAX/PROTECT

STEP 4
WAX/PROTECT

Waxing protects the paint finish from the elements by coating it with waxes, polymers, resins and silicones. In addition to protecting, wax can also "lock-in" the gloss to create brilliance, deepen/enrich dark colours and offer other benefits, such as water beading and light swirl removal depending on the formulation.

All of Meguiar's waxes are clear coat safe, with choices available in paste, liquid, or spray depending on your needs and preferences. Note that every car and car owner is different, as are the environments in which they live and how they are cared for. All of these variables affect how long a wax lasts. Generally speaking, we recommend waxing your car 3-4 times per year for maximum coverage, but more frequent waxing is OK!

Looking for the newest in Meguiar's paint protection technology? The all new Meguiar's® Ultimate Ceramic Coating uses proprietary technology that hardens into a solid barrier similar to professional-grade paint coatings. This hardened barrier provides durability beyond Meguiar's premium waxes.

MEGUIAR'S® CLEANER WAX

- Meguiar's versatile, 1-step wax cleans, polishes & protects.
- Cleans your paint while removing light oxidation & swirls.
- Rich conditioning oils polish & wax protects.

STEP 5 MAINTAIN

STEP 5 MAINTAIN

Once a car is waxed, the best ongoing protection for your car's finish is regular attention, or maintaining the finish. Regardless of whether your car is parked or being driven, it's in a hostile environment.

Everything that flies, from a gnat to a 747, expels contaminants that are determined to bond to and then etch into your car's finish. Add to this acid rain, industrial fallout and those unavoidable UV rays (the No. 1 cause of paint degradation), and you can see how your car is constantly under attack. The more your car is exposed to the elements, and the harsher the environment is where you live, the more attention your paint finish will require.

Fortunately, Meguiar's has made it easy for you with our mist and wipe detailers. Meguiar's® Quik Detailer™ and Meguiar's® Ultimate Quik Detailer™ allow you to safely and easily remove contaminants before they have time to bond to your paint finish. These products form the missing link between washing and waxing, allowing you to greatly extend the protective qualities of your car wax.

MEGUIAR'S® HYBRID CERAMIC DETAILER

- Spray on, wipe off Hybrid Ceramic protection.
- Removes dust & light contaminants.
- Enhances waxes, coatings & sealants.

769 ML PRODUCT CODE: G200526

MEGUIAR'S® QUIK DETAILER™

- Maintains your vehicle's appearance and lubricates the surface whenever you clay your vehicle.
- Removes harmful contaminants before they damage your paint finish.

473 ML PRODUCT CODE: A3316

MEGUIAR'S® PAINT, DASH & GLASS INSIDE & OUT DETAILER

- Versatile detailer spray.
- Mist and wipe detailer quickly and easily cleans and protects, making it the perfect choice for maintaining your vehicle.
- It cleans and protects many of the surfaces in and around your vehicle.

710 ML PRODUCT CODE: G250224

WHEELS AND TYRES

WHEELS & TYRES

After the vehicle itself and the exterior paint colour, arguably the most important and defining feature of a car is its wheel & tyre package. What used to be limited to paint, chrome and aluminum has expanded into a variety of finishes from custom wheel manufacturers who are constantly driving advances in design and materials. Similarly, car makers have also added a diverse offering of wheels. Whether your ride's equipped with custom 3-piece forged rims, factory clear coated silver alloys, or a trick set of chrome plated wires, Meguiar's has developed the correct cleaners, polishes & polishing tool to make your wheels look their best.

But clean wheels with dull, dingy tyres is just wrong, so Meguiar's also offers a range of tyre dressings to make your tyres look their best. And in addition to improving your tyre's appearance, Meguiar's tyre dressings also protect your tyres, helping to prevent browning & premature aging of the rubber.

MEGUIAR'S® ULTIMATE ALL WHEEL CLEANER

- Active gel quickly dissolves heavy brake dust. Turns purple as it dissolves brake dust.
- Tough on road grime and dirt, but not your wheels.
- pH balanced - Safe for all wheel finishes!

710 ML PRODUCT CODE: G180124

MEGUIAR'S® HOT RIMS™ BLACK WHEEL CLEANER

- Safe on all black finishes: gloss, matte, satin, black chrome, etc.
- Foaming gel sticks & dwells for deep cleaning.
- Fruity scent for enjoyable usage; no harsh chemical smell.

710 ML PRODUCT CODE: G230524

MEGUIAR'S® METAL POLISH

- Safe for chrome, polished aluminium, and other uncoated metals.
- Removes oxidation, stains, tarnish, and minor swirls for a mirror-like finish.
- Ideal for cars, boats, and motorcycles.

170 G PRODUCT CODE: G211606

MEGUIAR'S® ENDURANCE™ TIRE GEL

- The Original! Endurance Tire Gel has long been the enthusiast's choice.
- Long-lasting shine remains for weeks, even through rain!

473 ML PRODUCT CODE: G7516

MEGUIAR'S® ULTIMATE INSANE SHINE TIRE & TRIM GEL

- Delivers a deep black, glossy shine for tyres and exterior trim.
- Advanced polymers add UV protection and resist rain and washing.
- Rich gel formula spreads evenly with no overspray, runs, or sling.

473 ML PRODUCT CODE: G262016

MEGUIAR'S® HOT SHINE HIGH GLOSS TIRE COATING

- Leaves tyres with a rich, black, glossy finish that lasts for weeks.
- Helps prevent cracking, browning, and premature aging.
- Easy aerosol application with no drips, streaks, or messy overspray.

425 G PRODUCT CODE: G13815

MEGUIAR'S® HOT SHINE TIRE SPRAY

- Delivers a deep, premium shine for tyres.
- Blend of premium silicone polymers for extended shine and durability.
- Self-spreading formula ensures an even, uniform look.

709 ML PRODUCT CODE: G12024

INTERIOR

INTERIOR

Just because Meguiar's is best known for polishes and waxes, doesn't mean we forgot about the inside of your car. Meguiar's has developed an extensive line of products to clean, restore and protect the interior of your car.

Starting with Meguiar's® Quik Interior Detailer you can quickly and easily freshen up all the surfaces of your car, leaving behind a clean detailed look. To add shine and protection to your vinyl and rubber surfaces, Meguiar's line of protectants will do the job. Meguiar's® Ultimate Protectant will keep your sensitive vinyl dash board looking like new with superior, long lasting, UV protection.

And for the very best in luxury, Meguiar's leather cleaners and conditioners are #1 in the industry! Meguiar's leather products are perfect to maintain the look & feel of your vehicle's leather surfaces.

MEGUIAR'S® QUIK INTERIOR DETAILER

- Safely cleans & enhances all interior surfaces.
- Restores & protects the original appearance.

473 ML PRODUCT CODE: G13616

OTHER SURFACES

OTHER SURFACES

Detailing your vehicle always comes down to the finer details. Now that you've restored and protected your paint, what do you do with all the non-painted surfaces like vinyl, cladding, headlights and glass? Well, Meguiar's has you covered!

Meguiar's® Ultimate Black will bring back to life any faded and tired looking rubber, plastic or vinyl trim. This special formula will also last through rain storms and multiple washing, without leaving those ugly black streaks that run down the side of your car like other trim restoring products.

And have you noticed all those yellowed and hazy headlights on the road? Plastic headlights take a lot of abuse, whether it's damaging UV rays, fine scratches or road grime, they also need attention. Meguiar's full line of headlight restoration products can restore even the most severely oxidized headlights; or prevent your new cars lenses from ever fading in the first place.

MEGUIAR'S® HEAVY DUTY BUG & TAR REMOVER

- Professional strength, clear coat safe technology.
- Tough on bugs, easy on paint & all exterior surfaces.
- Powerful foaming action loosens stuck bugs.

425 G PRODUCT CODE: G180515

MEGUIAR'S® ULTIMATE BLACK PLASTIC RESTORER

- Brings new life to all exterior plastic, vinyl & trim.
- Make trim & plastic look like new.

473 ML PRODUCT CODE: G15816

MEGUIAR'S® HEAVY DUTY TRIM RESTORATION KIT

- Advanced plastic trim restorer that contains a plastic trim cleaner and trim shield protectant that restores and protects faded trim in minutes.
- Just two easy steps to revive and protect trim pieces.

KIT PRODUCT CODE: G250100

MEGUIAR'S® PLASTX™ CLEAR PLASTIC CLEANER & POLISH

- Makes clear plastics clear again.
- Removes fine scratches, oxidation & grime.

296 ML PRODUCT CODE: G12310

MEGUIAR'S® PERFECT CLARITY™ GLASS CLEANER

- Pro-strength for quick & easy cleaning against bugs, tree sap, smoker's film & bird droppings.
- Safe for use on all tinted windows.

709 ML PRODUCT CODE: G8224

MEGUIAR'S® ULTIMATE GLASS CLEANER & WATER REPELLENT

- Clean & treat glass in 1 step!
- Improves view in wet conditions.

ACCESSORIES

ACCESSORIES

Have you ever heard the phrase, “the right tool for the right job”? At Meguiar’s, our line of paint, wheel and interior products perform at their peak when used with high quality accessories. Microfibre towels are not all created equal and our Meguiar’s® Supreme Shine™ Microfibre Towel is a cut above the rest, making polishing and waxing even that much more enjoyable.

Ready to move up from hand compounding, polishing, and waxing? Using a DA polisher, you will achieve flawless results that cannot be matched by hand and without the worry of marring the finish. From first time users to professional detailers we guarantee you will love the results.

MEGUIAR'S® MICROFIBER WASH MITT

- Meguiar's Microfiber Wash Mitt is the ultimate choice for show car perfect finishes.
- Extra thick microfibre lifts and traps dirt and grime for a brilliant, swirl-free finish. The comfort-fit cuff and soft inner lining make this wash mitt a pleasure to use.

SINGLE PRODUCT CODE: X3002EU

MEGUIAR'S® WATER MAGNET™ DRYING TOWEL

- Meguiar's Water Magnet reduces drying time with less wring-outs by absorbing up to two times the water of traditional terry towels.
- The extra large 22" x 30" waffle texture wrings out easily and leaves a spot-free finish.

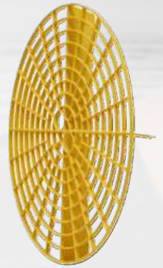

PRODUCT CODE: X2000EU

MEGUIAR'S® PERFECT CLARITY GLASS TOWEL

- Unique glass towel for superior results.
- Creates a streak-free, lint-free finish. Quickly removes glass cleaners.
- Ideal for use on interior and exterior glass and mirrors.

PRODUCT CODE: X210300

MEGUIAR'S® GRIT GUARD

- Insert for suitable wash bucket.
- Significantly reduces potential swirls and scratches by trapping heavier abrasive dirt out of harms way at the bottom of the bucket.
- Prevents grit particles from being churned up into the wash water.

SINGLE PRODUCT CODE: X3003

MEGUIAR'S® SOFT FOAM APPLICATOR PAD

- Ultra soft foam for applying waxes, ensures even, smooth application.
- Ultra-soft foam has tight cells.
- Pad is washable and reusable.

2 PACK PRODUCT CODE: W0002

MEGUIAR'S® SUPREME SHINE™ MICROFIBER TOWEL

- Meguiar's Supreme Shine is an incredibly plush microfibre towel for producing swirl free, mirror-like results.
- The thick, deep, dual-sided microfibre pile absorbs three times more than traditional terry towels providing faster wipe off with less efforts.

PRODUCT CODE: X2010EU

Hello Everyone,

For over a century, Meguiar's has truly entrenched its position as a global leader in car care. Here in Southern Africa we enjoy fantastic support for the brand as more and more people come to realise what Meguiar's can do for that most prized possession - their car. Simply put, Meguiar's fuels a passion for pride in vehicle appearance and ownership.

Never before has it been easier to restore and maintain a vehicle's appearance in immaculate condition. The speed at which car care technology has progressed over recent years is simply phenomenal and Meguiar's is at the very forefront of the research and development that moves the entire industry forward. A true market leader indeed!

As the exclusive distributor, we at Keizin Automotive are proud to bring these brilliant products to the local market.

As car guys ourselves, you will find us at countless local shows and events, sharing our knowledge and revelling in the fantastic local "car hobby" scene.

MACHINE POLISHING

Start and stop the machine with the pad sitting on the paint work as this will avoid product splatter. It is best to work on small areas rather than trying to tackle the whole

vehicle in one go. Work an area approximately 50cm X 50cm and use slow overlapping movements, until the product has turned to a haze. Wipe away the residue with a Supreme Shine™ Microfibre, and if necessary, apply some Quik Detailer® to the panel if the product is starting to dry and is difficult to remove. Re-examine the defect and repeat until fully removed. There is no need to apply heavy pressure to the head of the machine, just use the handle and light pressure to guide and steady the polisher. The following diagrams indicate the best application movements using your polishing machine. Once the defects have been removed, it is important to then polish and protect the paint work by applying a polish and then a wax. Use Ultimate Polish with a Yellow Polishing Pad followed by the Ultimate Wax with the Black Finishing Pad.

The wax can be applied to the entire car in one go. Allow the wax to fully dry and then buff off with a Supreme Shine™ Microfibre Towel.

TIP:

Use Meguiar's maroon coloured foam compounding pads for compounds, yellow polishing pads for polishes and black foam finishing pads for waxing. Select the right diameter pad variant to match your polishing machine.

STEPS:

1. Start working the product in overlapping horizontal movements.

2. Continue the overlapping in a vertical direction.

3. After completing steps 1 & 2 the panel should resemble the grid on the previous page.*

4. A third application will go even further to ensure more complete defect removal.

PROFESSIONAL

Meguiar's Professional & Detailer range is trusted & used by OEMs, professional detailers, auto-body repairers, aircraft maintenance organisations and all others striving for the best possible finishes.

MAINTAIN & OTHER SURFACES

OTHER SURFACES

Detailing your vehicle always comes down to the finer details. Now that you have restored and protected your paint, what do you do with all the other surfaces? Well, Meguiar's® has this covered. Meguiar's® Ultimate Protectant will bring back to life any faded and tired looking rubber, plastic

or vinyl exterior trim, regardless of the colour. This special formula will also last through rain storms and multiple washing without leaving black streaks.

Our Two-Step Headlight Restoration Kit will remove oxidation, yellowing, fine scratches and hazing in plastic headlights, restoring clarity and providing protection for up to a year.

Our Perfect Clarity™ Glass Cleaner has been specially formulated to deliver streak-free, crystal-clear optical clarity through glass. It is suitable on all tinted windows and is ammonia free.

Simply spray the glass cleaner onto the windows and wipe over with our Perfect Clarity™ Glass Towel.

TIP:

Meguiar's Metal Polish is great for polished, aluminium, chrome and stainless steel. It is formulated to quickly cut through oxidation, stains, and swirls that leaves you with a mirror-like finish without micro marring or swirling.

MAINTAIN

It is easy to keep that "just waxed" look every day by frequently using a mist & wipe product like Meguiar's® Quik Detailer or Ultimate Quik Detailer. Regular maintenance removes contaminants before they have time to bond to or etch into your paint finish. This is the missing link between washing and waxing that dramatically extends the durability of your car wax. Remove the detailer residue with a Supreme Shine Microfibre Towel. Ultimate Quik Detailer will maintain a deep rich shine between waxes, leaving an ultra-slick, ultra-dark finish that has great durability. This wax enhancing detailer creates high surface tension which adds protection and generates water beading.

TIP:

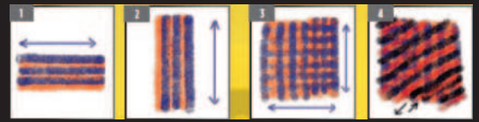

Meguiar's® Quik Detailer can be used as a lubricant for Meguiar's® clay bars, boosting clay bar performance and life span.

TIP:

Meguiar's® Ultimate Quik Detailer should NOT be used as a lubricant for clay as it produces too much lubricity!

MACHINE POLISHING

Whether you're a seasoned professional or casual user who wants to achieve quality, swirl- free results, this is the tool for you. The dual action (DA) polisher greatly reduces the amount of time it takes to apply paint compounds, polishes and protection products and produces results far superior to applying these products by hand. And because of its dual action – rotary and

***Working with a DA Polisher - machine flow pattern**

orbital, you never have to worry about burning the paint. It is important to remember that much deeper defects, where the scratch has gone through the clear coat, will not be able to be removed. If you can catch your finger nail in the scratch, we suggest seeking professional advice. Ensure that the vehicle is thoroughly washed and dried before attempting to machine polish. If there are above surface contaminants, remove these with the Smooth Surface Clay Kit. This will ensure that the defects can be correctly assessed, and as a result, the correct product can be chosen.

It is advisable to tape over any plastic trims and bumpers so that they remain clean. Before machine applying a compound or polish with a foam pad, prime the pad face with the product. Then apply additional product in a X shape before commencing.

TIP:

All the work shown here should be carried out on cool paint work and in a suitable work space. All the techniques mentioned can be applied to any other types of paint or gel coat. The better the lighting, the clearer you can see any defects. It is also important to remember to put the cable over your shoulder to prevent it dragging across the paint work. Don't forget to remove your belt. That buckle will scratch!

WHEELS & TYRES

It is important before attempting to clean wheels that both the wheels and brake calipers are cool. Unlike other wheel cleaners, make sure the wheel is dry when applying Meguiar's® Ultimate All Wheel Cleaner. Holding the bottle approximately

10-20 centimetres from the wheel, spray from the bottom up. This will prevent the product streaking. After leaving the wheel for 2-4 minutes, rinse off the residue thoroughly with a jet of water. Stubborn stains may need agitating with either a wheel brush or wash mitt. To ensure the wheel is fully dry, wipe down the alloy with a microfibre towel. Clean wheels can now be polished and waxed if necessary to make future cleaning even easier. With chrome and highly polished aluminium wheels, use Meguiar's® Metal Polish. It both cleans, polishes and protects the wheel from the environment. For clear coated alloy wheels, a wax such as Meguiar's® Cleaner Wax can be used to help protect the wheels and aid with the upkeep. With regard to the tyres, apply a tyre dressing such as Meguiar's® Endurance® High Gloss Tire Dressing to a dry tyre for deep dark and glossy tyres. Alternatively, Hot Shine Tire Coating can be used. This can be sprayed directly onto tyres. Simply spray and you are done.

TIP:

Your tyre dressing will last longer if you properly clean and prepare the surface of the tyre first. Using a brush with your wheel & tyre cleaner will remove dirt, grime and old tyre dressing quickly and easily.

INTERIOR CARE

Modern vehicle interiors are made from many different materials including plastic, rubber, leather, fabric, alcantara, carpet and glass. It is important that the most appropriate product is used for the specific surface. A versatile product is the Meguiar's® Quik Interior Detailer which

cleans and protects most interior surfaces. Simply apply to a Supreme Shine™ Microfibre Towel and gently work over the surface. Turn the towel over to a clean surface and remove any excess residue to leave the finish clean and protected. Interior plastics should be treated at least twice a year, to clean and protect them. Meguiar's® New Car Scent Protectant™ contains UV protectants to help reduce the drying and fading effects of the sun. To apply this product, spray a small amount onto a Supreme Shine™ Microfibre Towel and work across the area. Turn the towel over to a clean surface and remove any

excess residue to leave a satin finish. Meguiar's® Carpet & Interior Cleaner is ideal for removing the most stubborn contamination on fabric without discolouring the surface. Before applying the cleaner, first ensure that any loose dirt and dust has been vacuumed. Apply the cleaner directly to the surface and leave for approximately 30 seconds, then work over with a Supreme Shine™ Microfibre. Meguiar's® Carpet & Fabric Re-Fresher removes offending odours forever using permanent odour encapsulating technology pioneered and perfected by

Meguiar's®. Spray the Meguiar's® Carpet & Fabric Re-Fresher approximately 30cm from the fabric/material. For best results leave to sit overnight. Leather seats and trim should be cleaned and conditioned at least twice a year. Meguiar's® Gold Class™ Rich Leather 3-in-1 offers safe cleaning, conditioning and protection without using harmful or harsh solvents.

Before applying this product, it is important that the area is vacuumed to ensure all loose dirt has been removed. Once this has been completed, apply the

Leather 3-in-1 with a Meguiar's® Foam Hand Applicator Pad and work in for approximately 1 minute. Once complete, wipe off any residue with a Supreme Shine™ Microfibre Towel.

TIP:

For more delicate surfaces such as roof liners, dampen a microfibre towel and apply a small amount of Carpet and Interior Cleaner to it. Once cleaned, flip over the microfibre and buff off any residue. This will help avoid water marks.

TIP:

For odour elimination, Meguiar's® also has a range of one time use aerosol Whole Car Air Re-Freshers that are circulated throughout the car, including the ventilation system.

CLEAN & PREP

Any above surface contaminants such as tree sap, industrial fall-out and tar can be removed using the Meguiar's® Smooth Surface Clay Bar. Use half a bar of clay (approx. 40grams). Work the clay in your hands making it malleable enough to fold into a disk about 5cm across. Ensure the clay and panel are well lubricated with the included Meguiar's® Quik Detailer® and work the clay from left to right, using fingertip pressure only. Once completed,

the area should feel as smooth as glass. After working each panel, you will find that the clay has safely removed the contaminants without scratching the paint surface. How much of the bonded contaminant the clay removes depends on the overall level of contamination. Keep folding the clay over and re-shaping it until you no longer have a clean surface to work with. When this is the case you must dispose of the clay and use a new piece.

TIP:

If you accidentally drop the clay on the floor, we advise you throw it away and start with a new clean piece of clay. Remove any lubricant residue with a Supreme Shine Microfibre Towel.

The clay is also suitable for glass, headlights, chrome and any high gloss, smooth surface. To remove light scratches, oxidisation and swirl marks by hand, Meguiar's® recommend using Ultimate Compound with a Meguiar's® Foam Hand Applicator Pad. Ultimate Compound contains Meguiar's® super micro abrasive technology which quickly removes stubborn oxidation, stains, light scratches, swirls, blemishes and other sub surface defects, while polishing the surface to a mirror finish. Ultimate Compound is the perfect choice to prepare your paint surface for your favourite Meguiar's® polish & wax.To remove light scratches, oxidation and swirl marks by machine, Meguiar's® recommend using a dual action polisher machine. A DA polisher enables you to deliver flawless results time after time.

TIP:

Alternatively, try Meguiar's® Scratch Eraser Kit with a household drill to quickly and easily erase light imperfections. Read the kit directions before use.

TIP:

To remove an isolated fine scratch by hand, try Meguiar's® Scratch X®. Work against the direction of the scratch in straight overlapping lines with a Meguiar's® Foam Hand Applicator Pad. Note: If you cannot catch your fingernail in the scratch, you should be able to remove the scratch safely. Hard to remove defects will probably need to be removed by a dual action polishing machine.

POLISH, WAX & PROTECT

POLISH

To generate additional gloss, use Meguiar's® Ultimate Polish. It is a pure polish that has been specially formulated to create a dazzling, high gloss, 'wet look' finish. It can be applied by hand with a Meguiar's® Foam Hand Applicator Pad or by

a dual action polishing machine and a Meguiar's® Yellow Polishing Pad. Once the polish has been worked into the paint, remove any residue with a Supreme Shine™ Microfibre Towel. To remove light scratches, oxidation and swirl marks by machine, Meguiar's® recommend using a dual action (DA) machine polisher. A DA polisher enables you to deliver flawless results time after time.

WAX & PROTECT

After applying a polish, you need to apply a protective product such as Meguiar's® Ultimate Wax that will provide protection against oxidation, corrosion, UV rays and surface degradation. Starting on the bonnet, apply the Ultimate Wax to the applicator pad, ensuring you use very small amounts. A light dab of product on the applicator pad will be enough to cover half a bonnet on most cars. Apply the wax in a tight overlapping circular motion. There is no need to apply hard pressure. Allow the wax to fully dry and then remove with a Supreme Shine™ Microfibre Towel. Ultimate Quik Wax® can be used as a top up spray wax from time to time to deliver a quick and easy high gloss finish. Our Cleaner Wax provides a light polishing action while you wax, helping to keep light swirls at bay and is great for daily drivers exposed to the elements. Our Hybrid Ceramic Spray Wax offers quick and easiest application for extreme water beading. Just spray on a clean wet car, then rinse off and dry! It's that easy! No rubbing, curing, buffing or mess. Ceramic Made Easy.

TIP:

The darker the colour of the paint, the greater the benefits when using a polish.

TIP:

Ultimate Polish should not be allowed to fully dry on the paint surface and must be removed whilst still damp. A pure polish does not seal or protect the paint. The gloss created by a pure polish must be sealed in with a wax as the next step.

TIP:

Use the swipe test to check the wax has fully dried and is ready to remove. After leaving the wax 10-15 minutes on the panel, swipe your finger across an area that has been waxed. If the wax residue comes off cleanly with your finger it is ready to remove. If it smears it needs to be left a little longer.

DETAILING GUIDE

Detailing a vehicle can be defined as the comprehensive, technical process of cleaning, restoring and protecting every surface on a vehicle, both inside and out, in order to improve its appearance and preserve its condition over time. This means we go far beyond a standard car wash, focusing on the tiniest of details that

collectively enhance and beautify a cars appearance.

While detailing may seem the exclusive domain of trained professionals with power tools at their disposal, anyone with a little know-how and time to spare, can detail their own vehicle into a show & shine winner.

Of course, owning a dual action polishing machine, commonly referred to as a DA polisher, does make quick work of polishing and waxing and while producing the best results, is not essential. All Meguiar's® consumer compounds, polishes and wax products are formulated to be used by both hand or DA polisher.

We like to refer to detailing as a 5-Step process.

1 - Washing - this is something you may do once, twice or even more often each week to keep surfaces free of loose contamination such as mud, dust, rainwater marks and road grime.

2 - Clean & Prep - this refers to the removal of more stubborn bonded contamination, along with removal of fine scratches, etching, swirls and other defects in the paint. Unlike washing, this step need only be carried out once or twice a year, perhaps a little more frequently if your car is exposed to a harsher environment.

3 - Polish - A polish restores the natural high gloss appearance to paint. It seldom contains any protective characteristics, but gives your paint that "wet-look-shine" while helping to remove fine swirls.

4- Protect - Protecting your cars paint is essential. Waxes not only create a thin barrier of protection but also boost gloss, reflectivity and depth in paint.

5 - Maintain - Frequent car care is easy car care. Removing acidic bird droppings before they have a chance to etch into your cars paint is a great example. With regular and careful maintenance, steps 2 and 3 can be delayed.

It should be apparent from the above that using the right products for washing, drying, polishing and waxing are crucial. Old rags, when used as washing or drying cloths or polishing cloths, will instil fine swirls in your paint. Meguiar's offers all the "tools" to ensure your efforts are rewarded.

The vehicle should be hosed down while the bodywork is cool and in the shade. A jet wash can be used, however be cautious not to work too closely to the panel and always spray at a 45-degree angle to blow the dirt and grime away from the paint work. Dishwashing detergents should be avoided as they strip off your wax protection and pull the vital oils out of the paint and plastic trims, drying out your paint and accelerating the aging process. When you wash your car, only use a pH balanced car shampoo, like Meguiar's® Ultimate Wash & Wax.
This will enhance the appearance of your paint finish without stripping any protective wax coat. Use the two-bucket method with a grit guard to ensure the dirt is separated from the main washing solution.
The grit guard inserts into the bottom of the bucket and the fins of the grit guard stop any sediment being swirled back into the washing solution. Firstly, soak the wash mitt in the bucket with the soapy car wash solution and wash the panel.
Then, rinse the mitt in the second bucket of clean water to separate out the dirt and grit. Then return to bucket with the car wash solution to carry on washing the car. This will help minimise the chance of creating swirls during the wash process. Sponges and chamois cloths are a major contributor to the infliction of fine scratches or swirls. Therefore, Meguiar's® recommend using a Microfibre Wash Mitt. The wash mitt minimises the chance of creating swirls by lifting and trapping dirt within its pile unlike a sponge or chamois which works the grit against the paint.

It is important to properly rinse the wash mitt every time it is dipped into the bucket, so that any loose grit is freed from the mitt and drops below the grit guard. Once the vehicle has been washed, carry out a final rinse with a free-flowing stream of water. This will help create a sheeting effect, which will reduce the drying time. Any water that is left on the surface can be removed with our Microfibre Water Magnet® Drying Towel. Large microfibre drying towels give fast and spot free results, reducing the time it takes to dry your vehicle. Inner door edges should also be cleaned and dried, as water and dirt can accumulate here.

TIP:

Meguiar's® Ultimate Quik Detailer is a fantastic drying aid. Simply spray the detailer on the paintwork whilst drying to help create that flawless finish. It is also the best product to remove light contaminants such as dust or bird dropping between washing.

TIP:

Meguiar's® Heavy Duty Multi-Purpose Cleaner is a fantastic product to use as a pre-wash on the dirtiest areas of a car, such as the lower sills and inside wheel arches.

TIP:

Meguiar's® are frequently asked which is better, a towel or a synthetic chamois. The Water Magnet® Drying Towel is best by far. More durable in that it can be machine washed after use (do not use fabric softener), and it won't cause swirls and scratches as any dust is absorbed into the microfibres and not dragged across the paint.
